COMPANY PROFILE

Zhejiang CEN New Energy Technology Co., Ltd., is a professional heat pump factory combines R&D, manufacture, installation, trade, and after-sales of heat pumps, with complete performance 25H/P laboratory.

Our main products are air source heat pumps for home and commercial use, ground/water source heat pumps, combine cooling heating & hot water heat pumps, swimming pool heat pumps, etc.

We cooperate with first-class national academic institutions, established the heat pump research and development center, the laboratory, and testing center. With more than 25 engineers working on heat pump design, research and optimization.

Our laboratory can imitate different ambient conditions between -20°C to 50°C, to get the complete parameters from testing. Precise experiments make sure that our product design is reasonable, safe and stable.

We also have a professional installation team, which offers the best solution for installation, and instructions for after-sales. Our aim is to produce high quality product with our best service, and to grow up with our clients. Let's together create a win-win business relationship, and a more prosperous future!

Applications

Product Features

Large air volume, low noise fan motor: use airfoil shape, large chord, space distortion alloy blade, efficient internal rotor motor; large air volume, low noise, high efficiency and compact

Use stainless steel 304 material for heat exchanger side cover, fastener and other important parts etc.. Not easy to rust and corrosion, more durable.

Environmental protection refrigerant: protect atmospheric ozone layer, small pressure loss, stronger heating capacity, better heat transfer performance.

Compact Structure: Use the structure of V shape up&down design, convenient maintenance, reduce the occupied area effectively.

High precision electronic expansion valve: use electronic expansion valve to control, reach 500 steps adjustment, adjust super heat degrees accurately, achieve high efficiency operation system.

High efficiency shell and coil heat exchanger : It uses high efficiency fin tube, which heating area is 3.6 times than ordinary smooth tube, large diameter waterway design to make water-flow more smoothly, energy efficiency is more superior.

Heat Pump Water Heater Professional Compressor:

Compressor specially for heat pump water heater:

- 1. Copeland compressor specially for Heat pump water heater adopts Scroll heating technology.
- 2. With much wider operation range for different ambient temperature.
- 3. Not only can produce hot water for daily life use, can also produce high water temperature with 85 degrees C, it can reach the requirement for daily life and industrial use.
- 4. Specifically design for the heat pump water heater of high suction exhaust temperature and system high condensing temperature and high condensing pressure, performance is stable and efficient, long service life.

Controller:

- 1. Adopt famous master chip, ensure the unit running stable.
- 2. The controller has many protection functions: high pressure protection, low pressure protection, antifreeze protection, high temperature protection, overload protection, lose phase protection and reverse phase protection and so on.
- 3. Modular design, can be combined freely according to the required capacity.
- 4. Adopt intelligent constant temperature control, multi-point temperature measurement, multistage energy adjustment, automatically adjustment of temperature difference, intelligent loading and unloading compressor according to the changing of environment.

AC Contactor & Relay:

Adopt "Schneider" AC Contactor & relay, model selection according to the current capacity of 1.5 times, to ensure the efficient and stable operation for long time.

Heat pump water heater throttling technology patent,

With "special throttling branch for overload", under the bad environment, can effectively control the system

refrigerant flow, avoid system high pressure, prevent compressor overload operation; With "special throttling branch for defrosting", control the refrigerant flow according to defrost, avoid lacking of refrigerant flow when defrosting.

A02H series (Air source heat pump water heater circulation type)
